

AST Technology, a division of PCIC Group of Companies in the USA, specialises in comprehensive support services that are tailored to assist OEM customers with the tools they need to optimise cost, quality and delivery of injection mould building and plastic part production. AST Technology has got offices based in Herford, Germany and Oldham, UK.

Due to continued growth and development of the company, Philip Parmenter - Managing Director, appointed 3 new people to support projects predominantly in the UK and Germany:

- Paul Stidworthy has just been appointed as Business Development Manager. Stidworthy was previously Business Unit Director at a Medical Device company.
- Christopher Newman, former Moulding Process Engineer at Becton Dickinson started at AST as a Process & Training Engineer in April 2013.
- Adam Clitherow was appointed as a Process & Training Engineer in October 2012. Clitherow has previously worked at Elster Metering Ltd and Bepak.

Testimonial

Philip Parmenter
Managing Director
AST Technology

“Listgrove have supported AST Technology in strengthening its UK team with the recruitment of 3 new employees’ within a 6 month period. They have helped us from the initial definition of the role right through the process until new recruits were hired and on-board. They gave us access to a greater pool of candidates and facilitated the complete process in a very professional manner. The success from our perspective was mirrored by our new recruits who also commented positively on Listgrove’s support to them. I would certainly include Listgrove in my future recruitment plans.”
